

THERMODIEM

Press fact sheet

WILL TODAY FEEL WARMER THAN YESTERDAY?

APP	ThermoDiem
PLATFORM	iOS 27, watchOS 27, CarPlay
DEVICES	iPhone, Watch, CarPlay, Island
PRICE	Free
APP STORE	id912968904
CATEGORY	Weather
FIRST BUILT	2013
DATA SOURCE	Apple Weather (WeatherKit)
PRIVACY	No data collected
DEVELOPER	Mickey Delo
CONTACT	thermodiem@gmail.com
SOCIAL	@ThermoDiem

WHAT IT IS

A widget first weather app built on one idea: you already know how yesterday felt, so the most useful thing an app can tell you is how today compares. No charts, no percentages, no ten day forecast. One sentence, seven possible answers, and a color that carries the verdict before you have read a word.

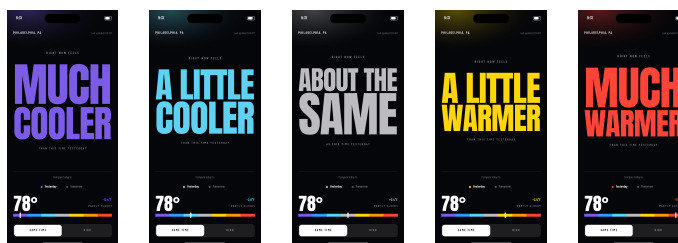

THE SEVEN ANSWERS

	much cooler	9°F or more cooler
	cooler	4 to 9°F cooler
	a little cooler	1.5 to 4°F cooler
	about the same	within 1.5°F
	a little warmer	1.5 to 4°F warmer
	warmer	4 to 9°F warmer
	much warmer	9°F or more warmer

THE ENGINE

Apparent temperature is computed with a multi regime model rather than a single vendor number: NOAA and MSC wind chill below 46°F, the Australian Bureau of Meteorology psychrometric model in the temperate band, and the Rothfusz heat index above 84°F, gated on dew point so dry heat does not produce false spikes. A solar term from UV index and cloud cover is added in daylight, and cosine blending across both handoffs keeps hourly curves continuous.

SCREENS

IN THIS KIT FILMS

Films, icons, logo marks, iPhone and Watch screens, CarPlay, Live Activity, widget tiles, this sheet

In this kit, see trailer/ · 2014 archive film: youtube.com/watch?v=At79vVxwF7I
